Faculty Incharge(s) : Dr.Vaishnavi Moorthy & Dr.R.Swathy
Department of Networking and Communications, School of Computing

Problem Statement

Cybercrime victims often struggle to identify scams, understand appropriate actions, preserve evidence, and prepare formal complaints. Cybersecurity information is often scattered and difficult for non-technical users to understand. There is a need for an accessible GenAI-powered assistant that provides personalized cybercrime guidance, complaint support, and awareness through a single conversational platform.

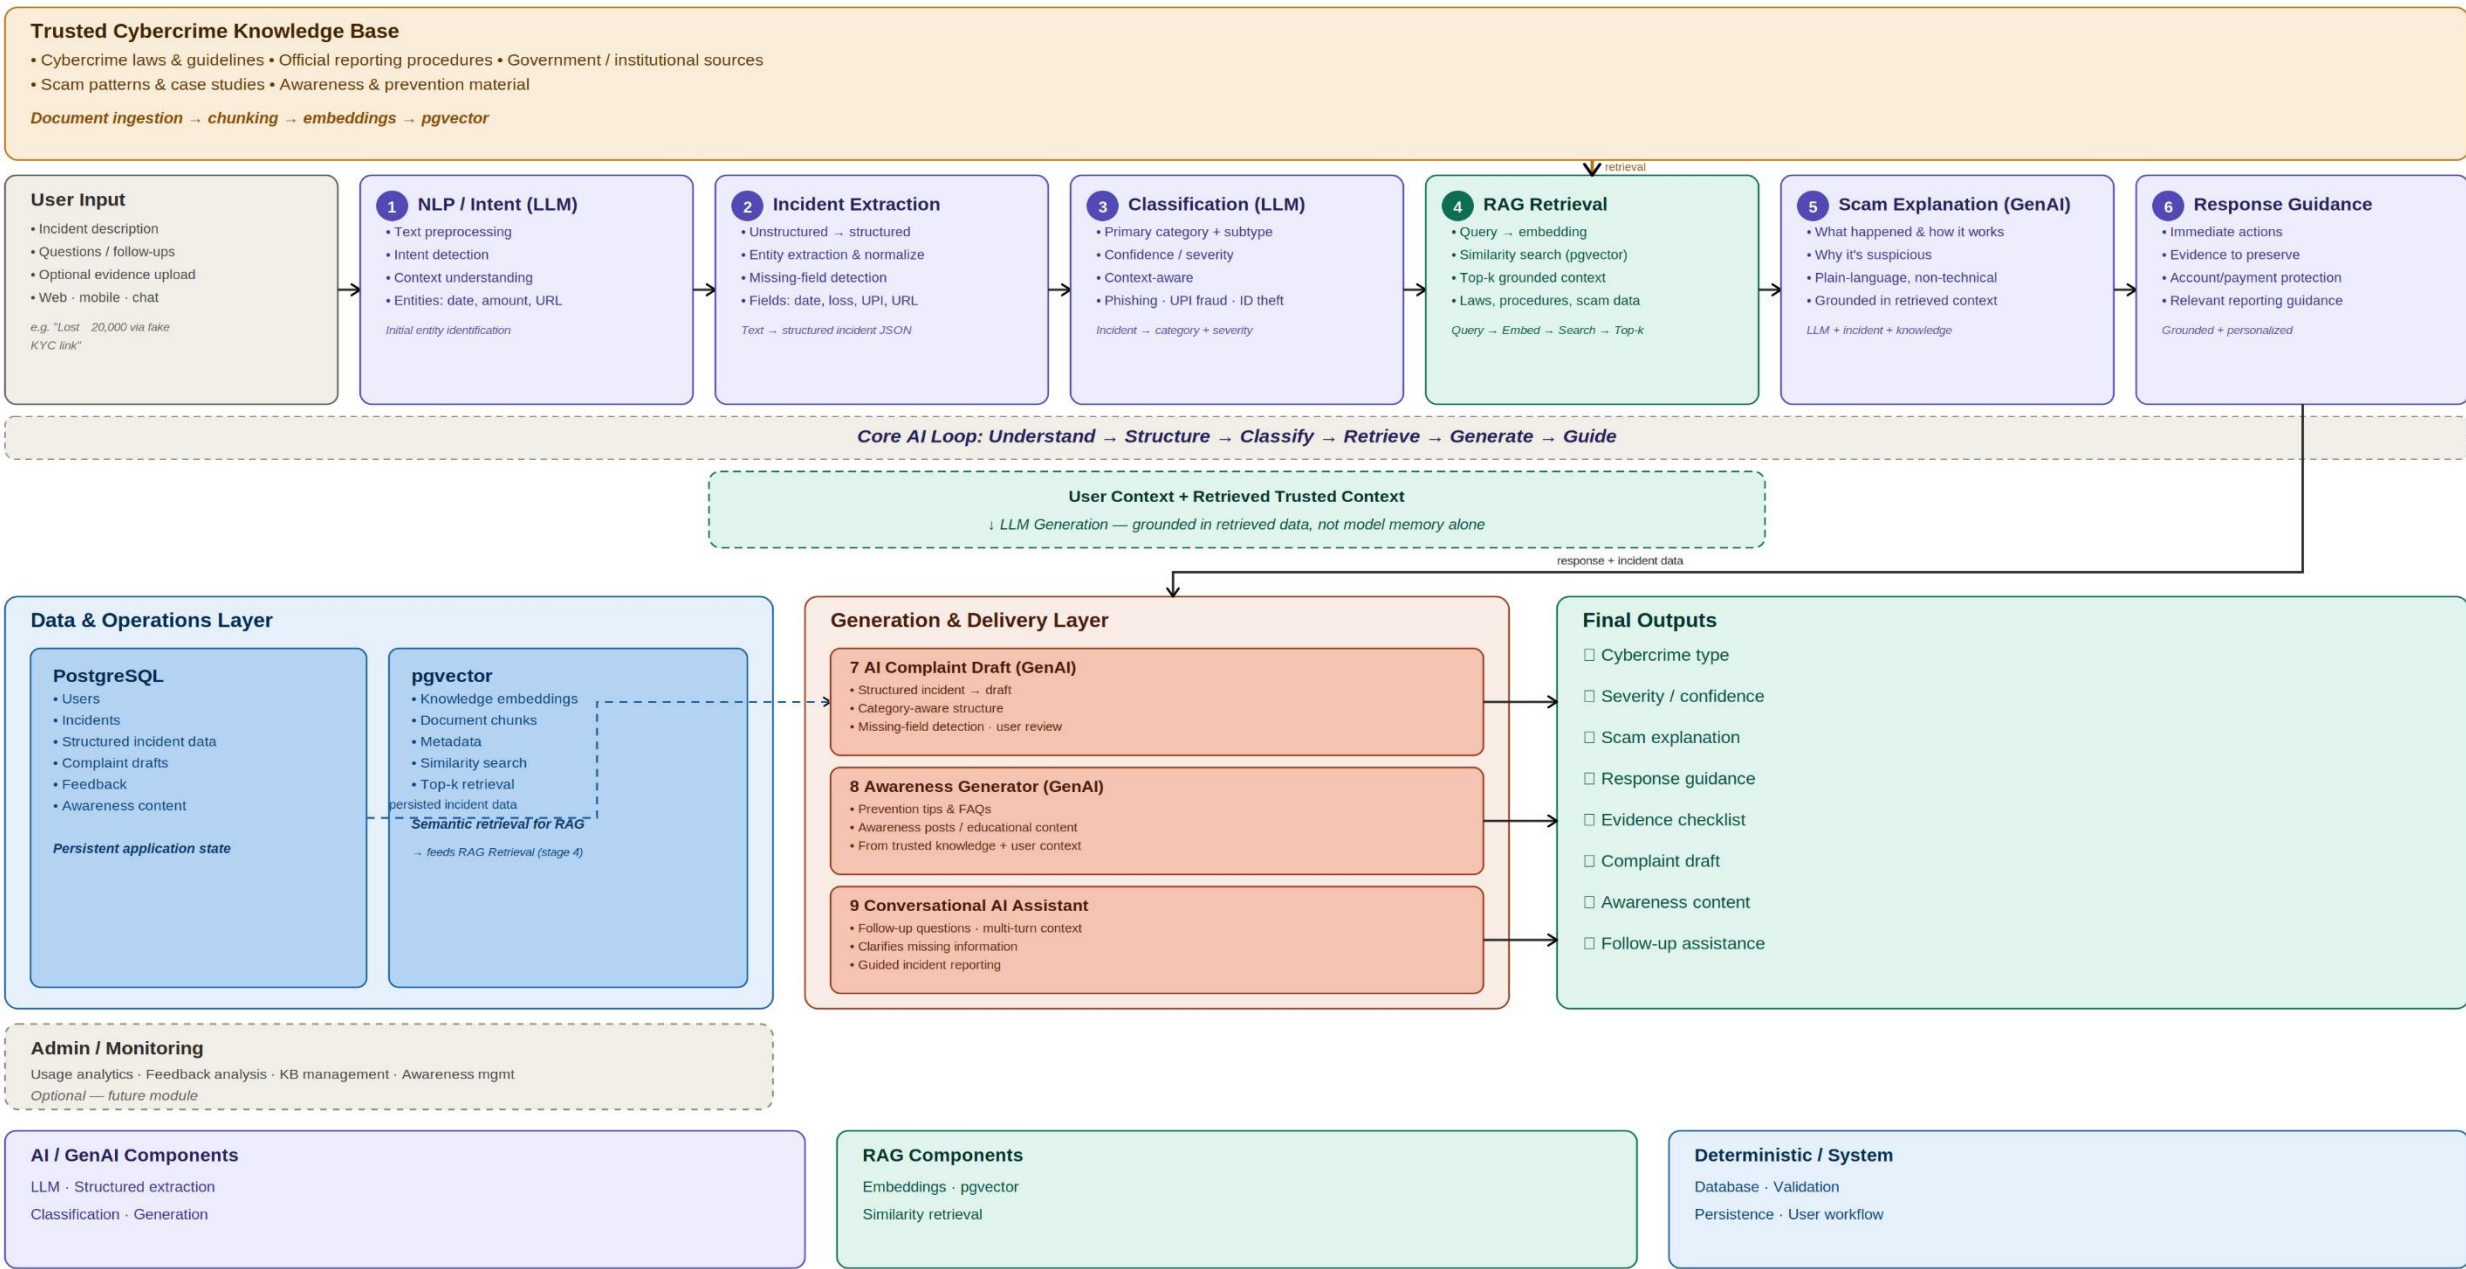

Solution

- AI-powered cybercrime assistant that helps users understand and report cybercrime incidents.
- Classifies cybercrime cases based on the user's description of the incident.
- Explains scams in simple language so that non-technical users can understand them easily.
- Provides response and evidence-preservation guidance to help victims take the right actions.
- Generates formal complaint drafts that users can submit to the appropriate authorities.
- Creates personalized cyber-awareness content based on the user's risks and experiences.
- Provides all these services through a conversational AI interface for easy and accessible support.
